\*Note: The Federal Safe Drinking Water Act, via the Underground Injection Control (UIC) Program, requires that a **Class V Injection Well Permit** be obtained for any instance in which man-made modifications are performed within the drainage area of a naturally occurring karst depression, sinkhole or other natural crevice. The Code of Federal Regulations, 40 CFR 144.3 defines Class V injection wells to include sinkholes among other physical entities that receive runoff.

For the LFUCG, the applicant will be required to submit (1) a copy of the permit filed with the EPA, and (2) electronic submission of all photography detailing the entire karst depression or natural crevice. Documentation must include details of any blockage or debris.
